AI product engineer. Built and shipped PosePal solo, an AI photo app live on the App Store with 90,000+ users. At Cord4, built an OpenAI-backed dispute analyst and an end-to-end Twilio voice and IVR module on a multi-tenant e-commerce platform serving Amazon, Target Plus and Wayfair merchants.

EXPERIENCE

Cord4 Technologies *Jun 2026 – Aug 2026*
AI Product Engineer *Ahmedabad, India*
Seller7, a multi-tenant e-commerce seller operations platform — Yii2/PHP, React 18, MySQL, AWS Fargate.

- Delivered the platform's Calls module end to end: Twilio inbound and outbound conferencing, per-agent identities, hold/transfer/three-way, an IVR builder and call transcription. Built bring-your-own-credential setup per seller rather than one shared client, plus proxy-aware webhook resolution, so every merchant's telephony config works without a code change.
- Built the Chargebacks and Disputes module with an LLM-backed dispute analyst (OpenAI) that assesses winnability against each merchant's refund and return policy and drafts rebuttal narratives for processor evidence fields.
- The engineering there was containment, not generation: grounding constraints blocking any assertion outside the evidence packet, defensive JSON parsing, and fail-soft degradation so an unavailable model never aborts evidence assembly. Kept advisory-only, so AI output never gates auto-submission or overrides verified delivery data. Unit tested.
- Designed a reusable filterFields API for the shared page header and migrated 73 screens onto it across three phases, cutting ~21,000 net lines of duplicated frontend code. A new filter became a config change rather than a code change.

Etech Global Services *Apr 2026 – May 2026*
Analyst II, Etech Insights *Gandhinagar, India*

- Built speech analytics searches and categories in QEval to surface topics and recurring drivers from recorded contact centre conversations for a Fortune 10 pharmaceutical distribution client, supporting automated topic identification across the program.

Krutanic Solutions *Dec 2025 – Feb 2026*
Business Analyst Intern *Remote*

- Cleaned an 11,000+ row retail dataset in Python (pandas), ran EDA across 6 demographic and geographic dimensions, and turned stakeholder questions into SQL and Power BI dashboards covering revenue segmentation, customer lifetime value and discount impact.

PROJECTS

PosePal — Live on the App Store, 90,000+ users Swift · SwiftUI · StoreKit 2

- Built and shipped solo under my own developer account, now at 90,000+ users: a cloud vision model for skin retouch, relighting and object removal, 330+ pose guides and StoreKit 2 subscriptions. Built the third-party-AI disclosure into onboarding so it cannot be bypassed, and authored the face-data privacy policy to clear App Review guidelines 5.1.1(i) and 5.1.2(i).

Seller7 AI Voice Calling Agent Anthropic Claude · Twilio · AWS S3

- Outbound voice agent that places the first call when a customer raises a return or refund, captures the reason in conversation and hands a staff member a one-click approve decision. The agent never moves money; a human always controls spend.

Nibodhah AI Recruitment Platform — Client Project Next.js 16 · React 19 · Gemini

- Analyses a job description into a structured brief, generates boolean search strings for LinkedIn and Naukri, then bulk-scores sourced CVs into a ranked leaderboard with matched skills, gaps and interview probes. Gemini behind a swappable provider layer, nothing stored server-side.

Polishr — iOS Resume Builder Swift · SwiftUI · StoreKit 2 · Supabase

- Replaced a prototype paywall with real StoreKit 2 purchases, verifying Apple JWS receipts server-side (x5c chain, ES256) rather than trusting the client, with Supabase as the single source of truth for entitlements. Moved a hardcoded key out of source, put auth tokens in the Keychain, audited row-level security on billing tables.

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, PHP, SQL, Swift

Frameworks: React 18/19, Next.js, Node.js, FastAPI, Yii2, Tailwind CSS, SwiftUI

AI Engineering: Anthropic API, OpenAI API, Google Gemini, LangChain, prompt design, structured output parsing, retrieval grounding, evaluation and failure-mode design

Platforms & Tools: MySQL, Supabase/Postgres, AWS (Fargate, SDK), Twilio (Voice, IVR, transcription), Amazon Selling Partner API, StoreKit 2, Docker, Git, CI/CD, Vercel; REST API design, multi-tenant architecture, database migrations, background schedulers, unit testing

EDUCATION

Indus University — B.Tech, Computer Science & Engineering *Graduated July 2025*
AWS Cloud Foundations | AWS Machine Learning Foundations (Amazon Web Services, 2024)
