EXPERIENCE

Cord4 Technologies

Jun 2026 – Aug 2026

AI Product Engineer

Ahmedabad, India

- Shipped features across Seller7, a multi-tenant e-commerce seller operations platform (Yii2/PHP, React 18, MySQL, AWS Fargate) serving merchants on Amazon, Target Plus and Wayfair; delivered 240+ commits across backend and frontend repositories in eight weeks.
- Built the Chargebacks and Disputes module, including an LLM-backed dispute analyst (OpenAI) that assesses winnability against merchant refund and return policies and drafts rebuttal narratives for processor evidence fields. Designed the system prompting, grounding constraints preventing assertions outside the evidence packet, defensive JSON parsing, and fail-soft degradation so an unavailable model never aborts evidence assembly. Kept advisory-only so AI output never gates auto-submission or overrides verified delivery data. Unit tested.
- Delivered the platform's Calls module end to end: Twilio outbound and inbound conferencing, per-agent identities, hold/transfer/three-way and colleague transfer, an IVR builder, and call transcription, including bring-your-own-credential setup per seller, proxy-aware webhook resolution, and call-logging and agent-status schema.
- Led a filter and table standardisation programme: designed a reusable filterFields API for the shared page header, then migrated 73 screens onto it across three phases plus a site-wide table sweep, cutting ~21,000 net lines of duplicated frontend code.
- Rebuilt vendor catalog SKU status management as a 12-state workflow with dated remarks, bulk Excel and multi-file upload and a daily auto-reactivation cron; consolidated CRM order-issue email into a unified tab with internal-email classification and filtering.
- Hardened production reliability: failure-safe log writes, malformed orders no longer aborting Fargate dispatch loops, deactivated sellers excluded from schedulers, and removal of an exposed database admin console. Shipped site-wide dark mode.

Etech Global Services

Apr 2026 – May 2026

Analyst II, Etech Insights

Gandhinagar, India

- Built speech analytics searches and categories in QEval to surface topics and trends from recorded contact centre conversations for a Fortune 10 pharmaceutical distribution client.
- Analysed call recordings and audio datasets to identify recurring patterns and drivers, supporting automated topic identification across the program.
- Built and updated reports tracking program KPIs for review by the analytics and program management teams.

Krutanic Solutions

Dec 2025 – Feb 2026

Business Analyst Intern

Remote

- Translated stakeholder questions into 10+ SQL queries and interactive Power BI visualisations covering revenue segmentation, customer lifetime value and discount impact.
- Cleaned an 11,000+ row retail dataset in Python (pandas) and ran EDA across 6 demographic and geographic dimensions, delivering a cross-filterable dashboard for non-technical stakeholders.

Prodigy Infotech

Jun 2024 – Jul 2024

Machine Learning Intern

Remote

- Built a hand gesture image classification model with TensorFlow and Keras; applied data augmentation and evaluated with accuracy metrics and confusion matrices.

PROJECTS

iOS AI Photo App — In App Store Review

Swift · SwiftUI · StoreKit 2

- Built an iOS photo editor in Swift and SwiftUI wired to a cloud vision model for skin retouch, relighting and paint-based object removal, alongside 173 pose guides and StoreKit 2 subscriptions; 60+ commits, submitted to the App Store and currently in review.
- Rebuilt the third-party-AI disclosure into onboarding so it could not be bypassed, and authored the face-data privacy policy to satisfy Apple App Review guidelines 5.1.1(i) and 5.1.2(i).

Polishr — iOS Resume Builder

Swift · SwiftUI · StoreKit 2 · Supabase

- Replaced a prototype paywall with real StoreKit 2 purchases mirrored into Supabase as the single source of truth for entitlements, with a 7-day trial and Apple JWS receipt verification (x5c certificate chain, ES256) rather than trusting the client; 50+ commits.
- Ran a security pass: moved a hardcoded Supabase anon key out of source, migrated auth tokens from UserDefaults into the Keychain, and audited row-level security on billing tables.

Nibodhah AI Recruitment Platform — Client Project

Next.js 16 · React 19 · Gemini

- Built for Nibodhah: analyses a job description into a structured brief and generates boolean search strings for LinkedIn and Naukri, then bulk-scores sourced CVs into a ranked leaderboard with matched skills, gaps and suggested interview probes.
- Next.js 16 (App Router, Turbopack), React 19 and Tailwind v4, with Google Gemini behind a swappable provider layer and nothing stored server-side.

Seller7 AI Voice Calling Agent

Anthropic Claude · Twilio · Fastify · Prisma

- Outbound voice agent that places the first call when a customer raises a return or refund, captures the reason in conversation and hands a staff member a one-click approve decision, so a human always controls spend.

jobhunt — Unattended Job Application Pipeline

github.com/sattviktripathy/jobhunt

- Open-source pipeline that aggregates seven public job sources, gates them with word-boundary scoring, runs research and drafting through the Claude CLI, then sends by SMTP or autofills ATS forms and tracks replies and follow-ups — two dependencies and no LLM API key.

Real Estate CRM — Lead Pipeline Platform

Next.js 16 · Supabase · Vercel

- Built and deployed a CRM for Terra Estates, a real estate client, covering lead capture, a drag-and-drop pipeline kanban (dnd-kit), contacts, tasks and activity logging across 99 TypeScript modules on Next.js 16, React 19, Supabase Postgres and Tailwind/shaden.
- Built a bulk Excel and CSV importer (SheetJS, PapaParse) with multi-sheet parsing, column mapping, phone-based dedupe and live progress; paginated reads past PostgREST's 1,000-row cap and added a scheduled GitHub Action keep-warm job to prevent Supabase free-tier auto-pause.

Therapist Website — Blossom Within Therapy

blossomwithinthrapy.co.uk

- Gathered requirements from a UK therapy practice and delivered 8 responsive pages in Next.js 15, TypeScript and Tailwind CSS using AI-assisted development; integrated a booking widget, Resend email API, SEO metadata and Open Graph images, deployed via Vercel CI/CD.

PDF Text Editor — Web Application

FastAPI · PDF.js · PyMuPDF

- Built a browser-based PDF editor with click-to-edit text on the rendered document: PyMuPDF extraction (bounding boxes, font metadata, rotation), overlay editing with PDF-to-canvas coordinate mapping, and Tesseract OCR fallback for scanned files.

PUBLICATION

Data-Driven Decision Making in Healthcare

IJARESM, 2024

- Benchmarked K-Nearest Neighbors, Random Forest, Decision Tree and a majority-vote Voting Classifier for diabetes prediction across a 768-record, 8-feature clinical dataset; the ensemble Voting Classifier delivered the highest accuracy, with Random Forest closest behind.
- Pipeline covered missing-value imputation, Min-Max feature scaling, k-fold cross-validation and hyperparameter tuning over neighbour count, tree depth and split criteria, evaluated on accuracy, precision, recall, F1 and per-model confusion matrices.

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, Swift, PHP, SQL, HTML, CSS

Frameworks: React 18/19, Next.js, Node.js, SwiftUI, Yii2, FastAPI, Fastify, Tailwind CSS, Ant Design, Redux, pandas, TensorFlow

AI Engineering: Anthropic API, OpenAI API, Google Gemini, LangChain, LLM prompt design, structured output parsing, grounding constraints, graceful degradation, Claude Code, Cursor, GitHub Copilot

Platforms & Tools: MySQL, Supabase/Postgres, Prisma, AWS (Fargate, SDK), Amazon Selling Partner API, Twilio (Voice, IVR, transcription), StoreKit 2, Docker, Git, Bitbucket, Postman, Power BI, Vercel

Concepts: REST API design, multi-tenant architecture, plugin architecture, database migrations, background schedulers, unit testing, CI/CD, Agile

EDUCATION & CERTIFICATIONS

Indus University — B.Tech, Computer Science & Engineering

Graduated July 2025

Certifications: AWS Cloud Foundations | AWS Machine Learning Foundations (Amazon Web Services, 2024)
